

UXR

QUALITY BORESCOPIES AT GREAT PRICES

Carrying Case

UXR offers a variety of protective cases to house our borescopes while they are being transported and not in use. All borescopes should be stored immediately after use in their protective case to prevent damage. These cases are available for different budgets and price ranges as well.

The standard case size is 6" H x 19" x 16". It is a poly shell case with die cut foam inserted to properly hold the borescope instrument and accessories inside the case depending upon which kit or instrument it is delivered. This is the case that is shipped as a standard product with the FFPACK, FF3500, FF4000, FF6000 and RBP-1 series and it is included in the price of the kit or instrument.

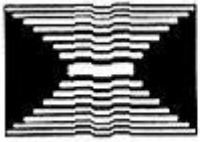

* FFPACK1 and FFPACK3 kits are configured to hold the LSP1 light source and accessories.

* FF3500, FF4000 and FF6000 units they are shipped in the standard case, however the die cut foam is designed only to house the borescope itself - the light source is not designed to fit into this case with the scope.

FF8000 and AVIS series- require our heavy duty instrument case to protect this instrument. These cases are designed to house the light source/controller (AVIS) and the scope itself. This is a more expensive case and to protect your investment this option is quoted separately and not included in the price.

QUALITY BORESCOPIES AT GREAT PRICES

Carrying Case

The RBP-1 case uses the standard case except the diecut foam is designed to house the scope, light source and accessories.

The RBP-2 case has a special case which measures 7.5" x 23" x 14" and has metal latches. This fits a 16" long borescope, mirror tube, light source and accessories. (Not Shown)

The RBP-3 kit uses (2) cases. A special case is provided to house the 22" borescope and a separate standard case is provided to house the light source and accessories. (Not Shown)

Our tube or "scabbard" case is designed to hold either our 16" or 22" RBAC series rigid scopes. (Not shown).
